Response to Applicant's Amendment and Arguments

1. The amendment filed February 18, 2005, has been entered and made of record. Claim 19 has been cancelled. Claims 1, 7, 20 and 21 have been amended. Claims 1, 4-18, 20 and 21 are pending.

In response to the amendment, the rejection of claim 20 under 35 U.S.C. § 101 is withdrawn.

In response to the amendment, the objection to claims 1, 20 and 21 because of informalities, is withdrawn. The cancellation of claim 19 renders moot the objection to claim 19 on this ground.

In response to the amendment, the rejection of claim 7 under 35 U.S.C. § 112, second paragraph, is withdrawn.

The cancellation of claim 19 renders moot the double patenting rejection of that claim.

The indicated allowability of claims 1 and 21 is withdrawn in view of the double patenting rejection applied below.

This Office Action contains a new ground of rejection, and is therefore non-final.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA

1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1, 20 and 21 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 8 of U.S. Patent No. 6,810,079. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1, 20 and 21 of the instant application covers the same subject matter as that of claim 8, while providing a broader recitation of the same invention, and with minor differences being well known in the art..

For example, the function recited in a) of current claim 1 is inherent in step a) of the patent's claim 1 (from which claim 8 ultimately depends). The function recited in b) of current claim 1 is provided for by the patent's claim 2 (from which claim 8 depends). The function recited in c) of current claim 1 is provided for by the patent's claim 7 (from which claim 8 directly depends). The function recited in d) of current claim 1 is provided for by the patents claim 2. The function recited in e) of current claim 1 is provided for by the patent's claim 1, steps b) and c). Note that the patent's specification defines converging (step c)) as utilizing an active contour model (column 8, lines 50-51). The patent's claim 8 is drawn to a method, whereas current claim 1 is drawn to an apparatus, performing an analogous method. The Examiner takes Official Notice that

apparatus are well known for implementing image processing methods. It would have been obvious to one of ordinary skill in the art to implement the invention of the patent's claim 8 in an apparatus because this would allow the method to be performed.

An analysis similar to that presented above for current claim 1 is applicable to claim 21.

An analysis similar to that presented above for current claim 1 is applicable to current claim 20, with regard to the claimed elements. The patent's claim 8 is drawn to a method, whereas current claim 20 is drawn to a computer-readable storage medium storing program codes for causing a computer to perform the image processing steps. The Examiner takes Official Notice that computer-readable storage medium storing program codes for causing a computer to perform image processing steps are well known in the art. Use of a computer and associated computer-readable storage medium has many inherent advantages for performing image processing, including improved flexibility, the widespread availability of computers, the low cost of computers, etc. Therefore, it would have been obvious to one of ordinary skill in the art to implement the invention of the patent's claim 8 in an a computer with associated computer-readable medium.

Allowable Subject Matter

4. Claims 4-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
